

## Cylindrical abrasive canvas rolls

Corundum abrasive canvas rolls, cylindrical shape **PR**, used for leveling in places of difficult access. When the outer layer of the abrasive canvas is consumed, the new underlying layer comes into action, thus always allowing excellent removal.

Always grind with the tip and never with the flat surface, to avoid damaging the adhesive with heat. For processing steel and stainless steel.

## Conical abrasive canvas rollers

Corundum abrasive canvas rolls, cylindrical shape **PRK**, used for leveling in places of difficult access. When the outer layer of the abrasive canvas is consumed, the new underlying layer comes into action, thus always allowing excellent removal.

Always grind with the tip and never with the flat surface, to avoid damaging the adhesive with heat. For processing steel and stainless steel.
