

TECHNICAL DATA SHEET

G350 Coppergrease

Copper grease

Lubricating copper grease; **anti-seizure**; it prevents wear and the metal/metal locking of parts subject to very high loads; it reduces friction and over-heating; **hydro-repellent**; it prevents rust or corrosion; it withstands corrosive agents such as salt water, oils, acids and alkaline solutions.

Available as spray.

APPLICATION AREAS: mechanical workshops in general; nautical sector; for the protective lubrication of components exposed to high temperatures; threaded parts in general; pins, bushes, shafts, pulleys, forced couplings, valves, cables and tie rods, expansion joints, and so on.

USE: apply the product in the most appropriate way.

FEATURES

- Appearance: copper liquid, mushy
- Odour: characteristic
- pH: N.a.
- Flash point: below 0°C
- Relative density: about 0.85 gr/ml
- Water solubility: insoluble
- Lipid solubility: soluble
- Heavy metals: not present
