Silicone-based release agent without solvent

Silicone-based **solvent-free** spray with high **anti-adhesive** and **sliding** properties; ideal as a release agent for moulds of plastic materials; **antioxidant** for the protection of mechanical parts in general; it **prevents material cracks**; a chemically neutral product.

Available as spray.

APPLICATION AREAS:

injection moulding or extrusion processes of plastic material and elastomers, such as sliding film for plastic/plastic or plastic/steel material couplings; protection and polishing of plastics and rubber.

USE:

apply in the most appropriate way, according to the application description.

DO NOT SPRAY close to paint lines and on anything that is to be subsequently painted or subject to surface treatment.

FEATURES

- Appearance: limpid liquid, colourless
- Odour: none
- pH: N.a.
- Flash point: below 0°C
- Relative density: about 0.90 gr/ml
- Water solubility: insoluble
- Lipid solubility: soluble
- Heavy metals: not present
